

## Handball - Vincent Griveau

### Men's French Handball Teams Use Dartfish for National Training

Today, video takes an important place in performance development for handball. In 2003, Claude Onesta chose to create a job as a video analyzer, linked to Dartfish Software.

#### Vincent Griveau

*30 years old, CTR Handball in Midi-Pyrénées  
Trainer of Toulouse - talented future professional players  
Trainer at the Training Centre (1st Division)  
Video Analyst for the Men's French Handball Team*

*« The specialty of a national selection trainer is that he doesn't train! We don't have the time a regular regional trainer has, to really impact the game and players' behavior. The French National Trainer must prepare the team for competition with little time to spare. The use of video helps us gain the valuable time needed for preparation, for example recognizing collective game principles that we must follow. »*

#### Basics

**Through game analysis of our team and advanced scouting of the opposition, Dartfish allows our technical staff and players to receive visual feedback to:**

- > Build our game strategy and make the necessary adjustments
- > Recognize the opposition's tendencies to better anticipate situations for upcoming games
- > Develop permanent and accurate information, by updating our video library
- > Forward our analyses to coaches and players to prepare for the elite renewal process - replacing the current generation with the next generation of elite players.
